

How to Locate Missing Files from your Project

This message will pop up in your software if you have started a project but then moved the images files into a different location then gone back to work with it.

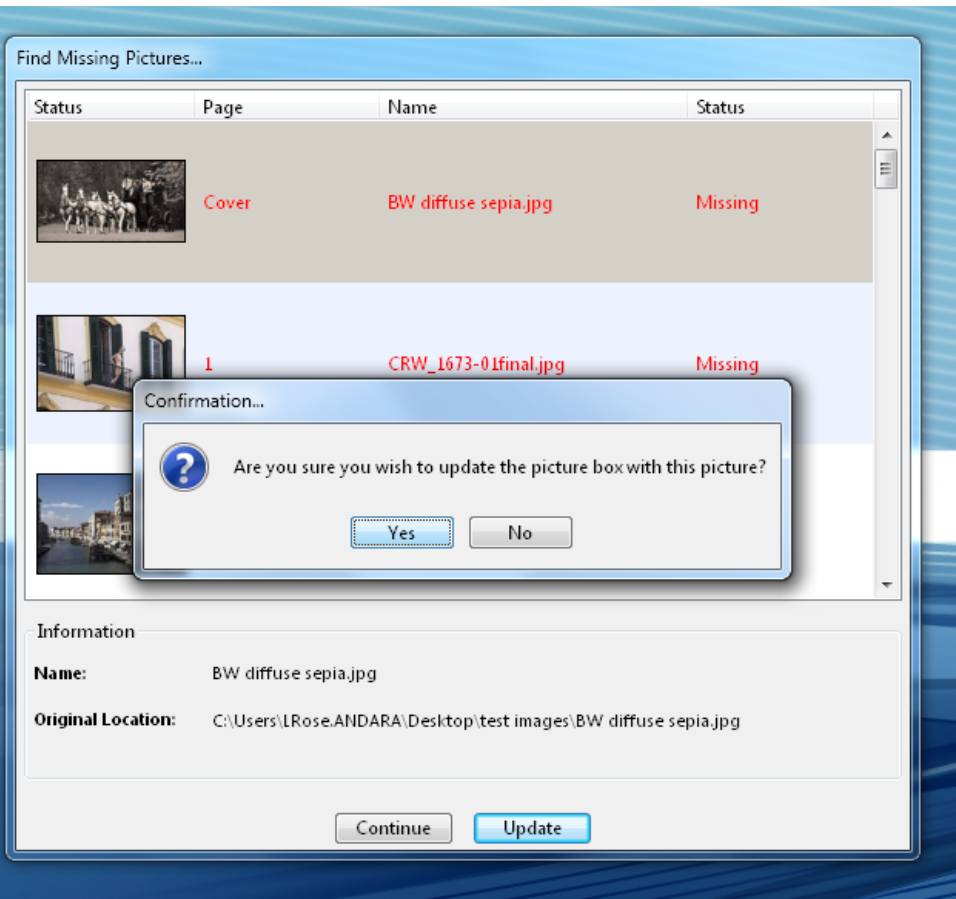

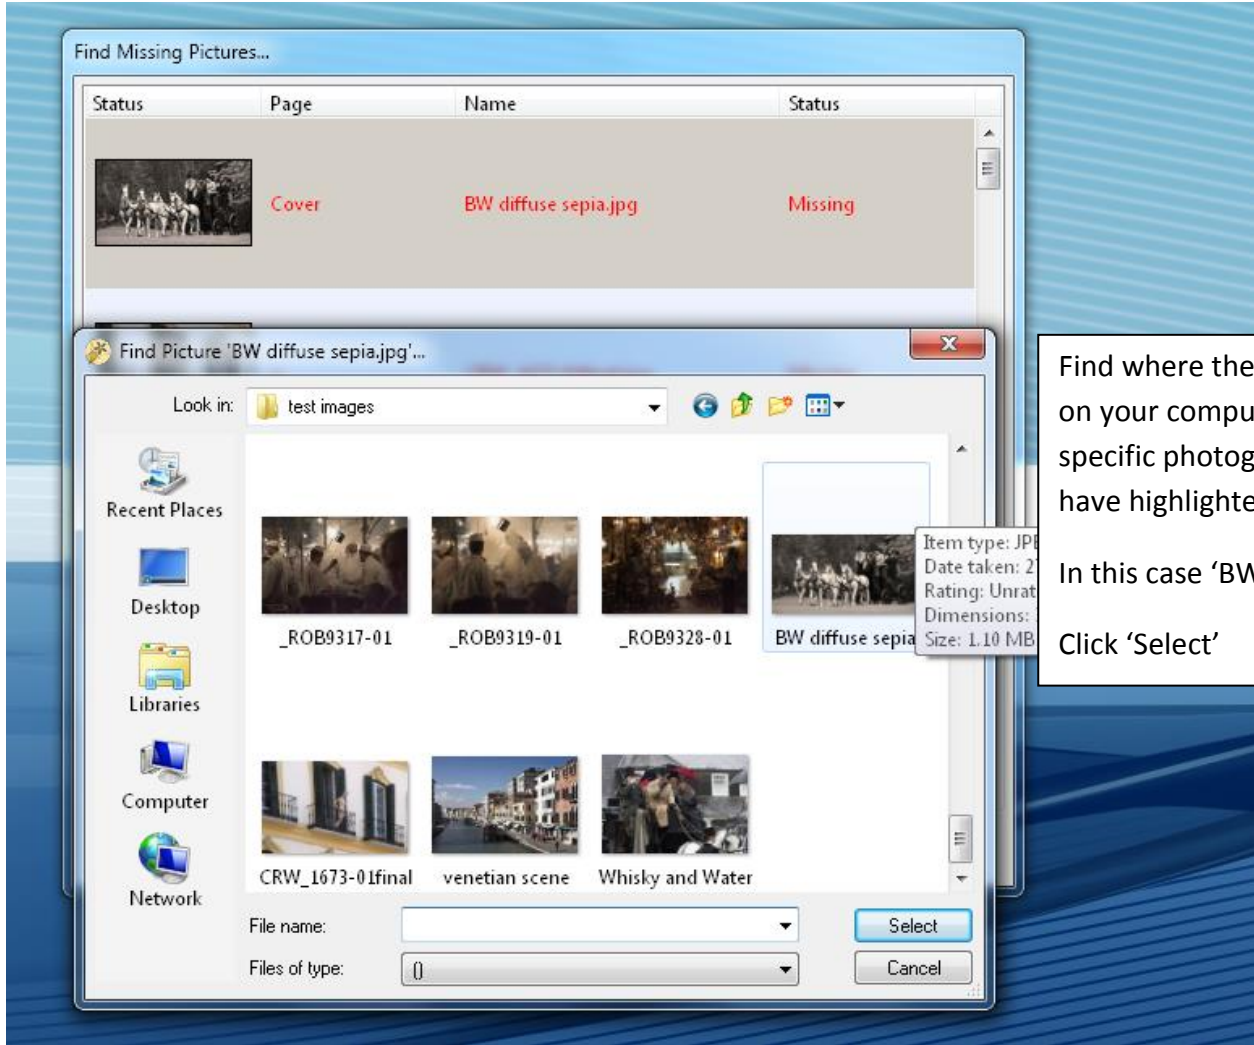

The software links to your original images to speed up the import process and software functions.

When you upload your project you must ensure all of your files are stored on your computer and your project is linked to the files. You can move the images once your project has successfully uploaded to us.

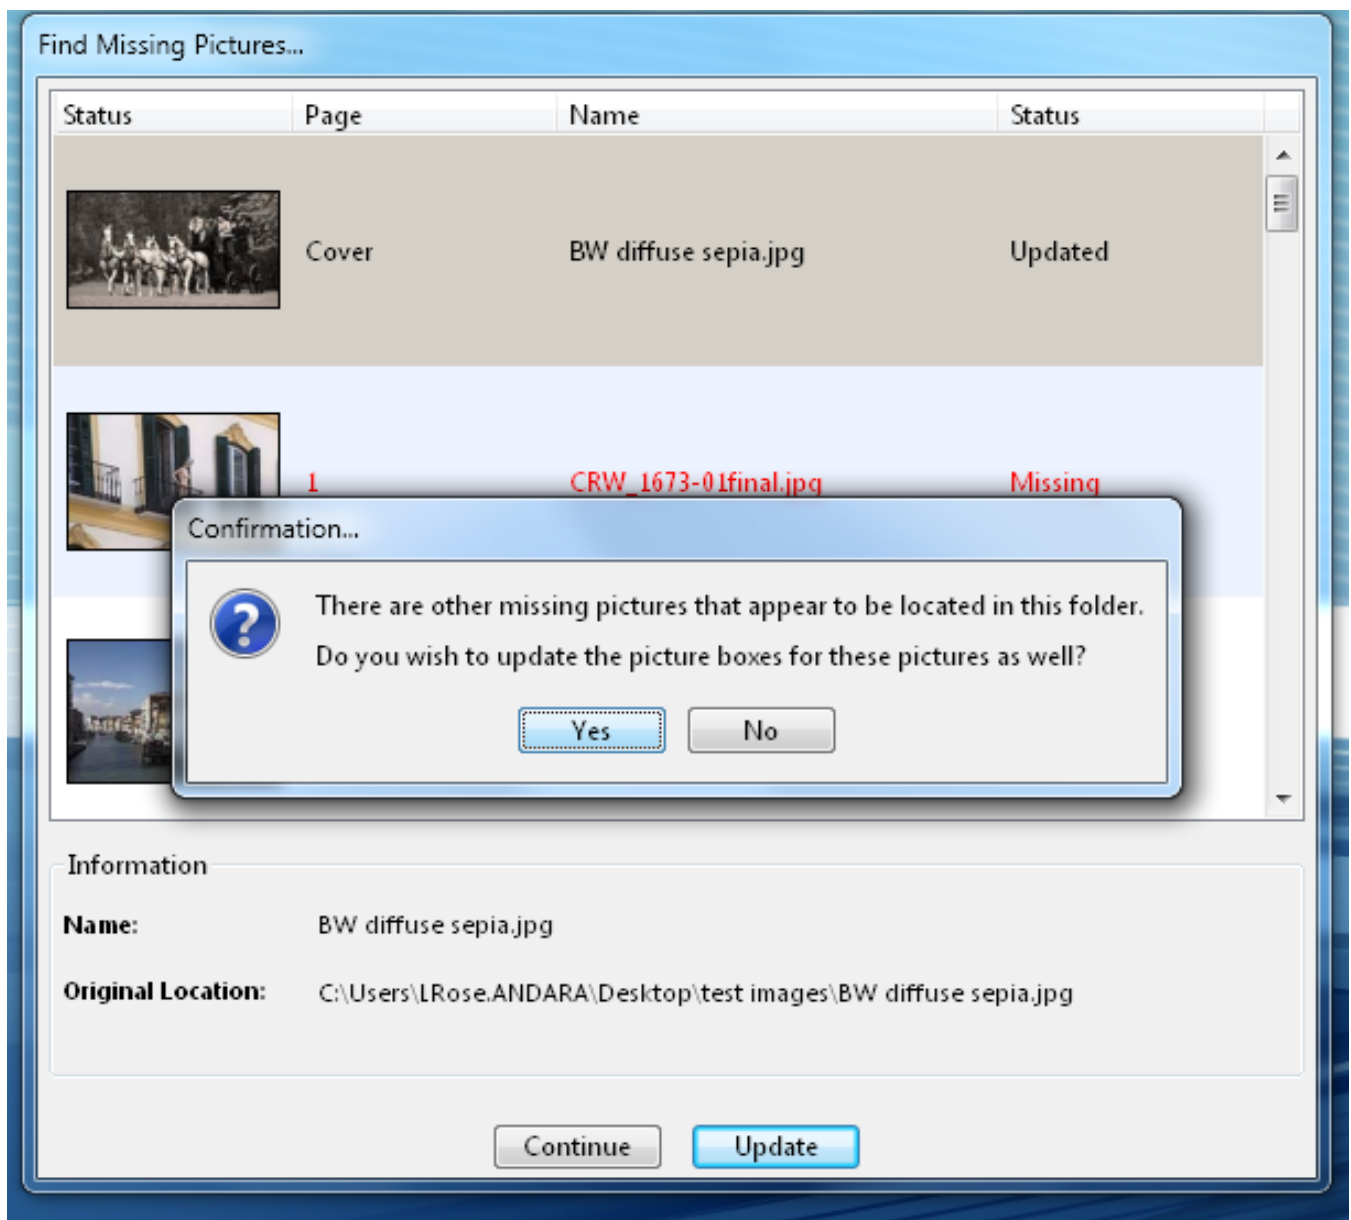

Click on the top picture and click 'update'

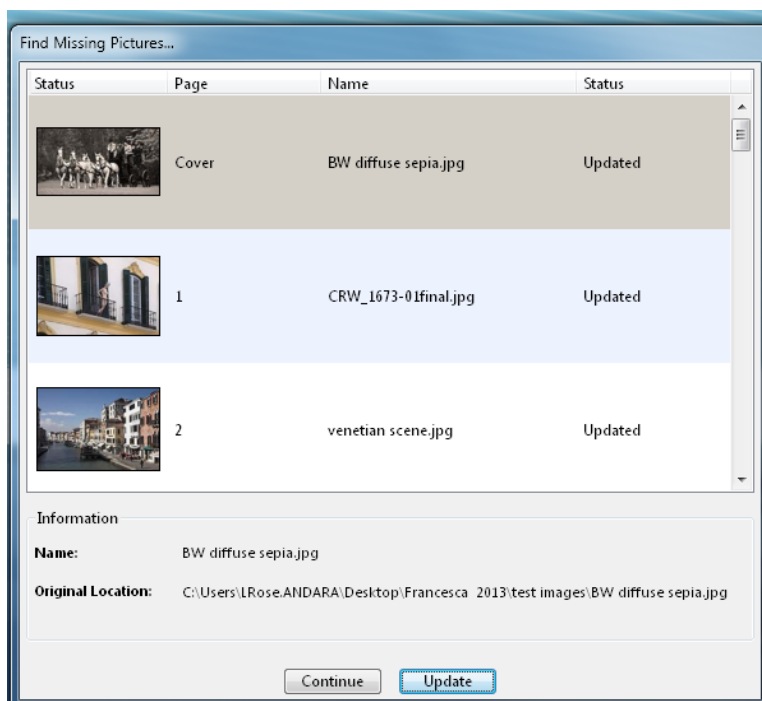

(This is a lot easier to do if all of the missing files are in the same folder)

It will then ask you if you are sure – if you are then click 'Yes'

This message should then appear on your screen. If all of your missing files are in the same folder then click 'yes' and they will automatically update. If they are not then you can either put them all in the same folder so this function works or individually find each photograph on your computer.

Your files should then all have been found and updated. Click 'continue' to continue creating your project.
